Ukraine’s update on NAP/NAS process

EU4Climate Regional Workshop on National Adaptation Plans and Strategies

Mykhailo Chyzhenko, Ministry of Environmental Protection and Natural Resources of Ukraine

National Adaptation Strategy: Institutional and Policy Background

- **2017** – National Climate Policy Concept until 2030
- **2017** – Action Plan to the National Climate Policy Concept until 2030
- Draft Climate Adaptation Strategy for the Agriculture, Forests and Fisheries Sector by 2030
- **2020** – Presidential Decree on the National Security Strategy of Ukraine – to develop the National Strategy on Environmental Security and Climate Change Adaptation of Ukraine
- Draft NDC update includes adaptation component

EU4Climate support in NAS process

- October 2020 – **Climate Change Adaptation Working Group** (CCA WG) established to work on the National Adaptation Strategy of Ukraine by 2030 development (150+ members)
- 12 November 2020 – CCA WG **Kick-off meeting**
- **Expert team recruited** to develop draft NAS and to coordinate CCA WG
- 9 Working meeting carried to discuss the Strategy
- Online consultations with the CCA WG via google drive services
- Draft Strategy published on the Ministry's website on **1 March 2021**

Draft Environmental Security and Climate Adaptation Strategy by 2030

- Defines key risks for national security, caused by climate change
- Describes **known** risks and vulnerabilities to climate change for 10 sectors and natural components (coastal zones, biodiversity, water resources, health care, energy, forestry, cities and public communities, fisheries, hazards risks, agriculture and soils, transport and infrastructure), tourism)
- Names **key cross-sectoral problems** to be addressed, and **relevant tasks, ways and means** of addressing them
- Defines **Goal** (1), **objectives** (4) and **principles** of the Strategy
- Describes **monitoring, control and organizational support for the Strategy implementation**
- Includes expected results

Action Plan to the Strategy – under current development

EU4Climate Regional Workshop: Expectations

- **Cities and communities are part of the list of most vulnerable sectors of Ukraine's NAS** – experience of its implementation for this sector is precious and important during the NAS Action Plan development
- Several natural components are very vulnerable to climate change. Last year a **huge flood in Western Ukraine costed at least 100 million dollars** for the State Budget; **local farmers got much lower yields or even lost all of it** because of draughts. Preparedness to these extreme events **should be part of the national DRR strategy**, which is also very important for Ukraine in terms of the Action Plan development.
- National knowledge and experience on adaptation planning: approaches, process, indicators
